

# McAfee Total Protection Service

An always on-guard Security-as-a-Service

New threats are evolving daily and in greater numbers than ever before. Spam, phishing, viruses, web threats, and hackers can steal your valuable data and disrupt your network. Without constant updates, your security software becomes obsolete. Keeping your business continuously up to date requires total protection against all types of known and unknown threats. McAfee® Total Protection Service safeguards your desktops, file servers, and email servers—with the convenience and ease of maintenance of a single, integrated Security-as-a-Service (SaaS) solution.

## Key Advantages

### Security in one solution

- McAfee Total Protection Service is a single, integrated solution for the desktop, file server, and email that is easy to install and easy to maintain

### Easy and affordable

- Get virus, spyware, spam, web security, vulnerability assessment, phishing, and desktop firewall protection, web-based management and reporting; automatic updates and upgrades; and around-the-clock technical support for an annual low-cost subscription fee
- Reduce the need for additional security management software, hardware, technical support, or dedicated IT staff. The McAfee Security SaaS platform manages your infrastructure offsite and provides automated maintenance and reporting.

### McAfee SecurityCenter simplifies management

- With this simple-to-use, web-based console, you manage and generate reports on your security services
- Reporting dashboards can be quickly customized for better visibility
- SecurityCenter creates multiple user groups and centralizes all installations, configurations, reports, and updates

Total protection for your business means a comprehensive security solution that is always on guard, and always up to date—not just in the office, but also wherever employees work remotely. McAfee Total Protection Service, the industry's first truly integrated Security-as-a-Service (SaaS) solution, provides protection against endpoint, email and web threats—all managed online through the McAfee SecurityCenter.

### Lower Total Cost of Ownership

With a McAfee Security SaaS solution, you reduce your security licensing costs and capital investment in onsite hardware and software by leveraging our

expertise and managed infrastructure. Ideal for organizations of all sizes, McAfee Total Protection Service automates security and frees your IT staff from complex deployments, upgrades, and management. McAfee Gold Technical Support is included in the subscription for easy access to trusted security experts by phone, chat, and email.

McAfee Total Protection Service consolidates security with the following package offerings—all with instant access to the online McAfee SecurityCenter for centralized management.

	McAfee Total Protection Service	McAfee Total Protection Service—Extended	McAfee Total Protection Service—Advanced
McAfee SecurityCenter, for centralized visibility through an online management console	✓	✓	✓
Desktop and file server anti-virus and anti-spyware to scan and block out malware	✓	✓	✓
Desktop firewall to block hackers and intrusions	✓	✓	✓
Web security for safe surfing	✓	✓	✓
Web filtering to block unwanted websites		✓	✓
Vulnerability assessment to scan for perimeter weaknesses		✓	✓

Email server protection to scan for viruses and spam in house			✓

**System Requirements**

McAfee Total Protection Service is designed for the Microsoft Windows operating systems running on a PC platform.

Note: The following are general system requirements and may vary depending on your environment.

- CPU—Intel Pentium processor or compatible architecture
- RAM—512 MB minimum (one to two GB recommended)
- Internet connection—Microsoft Internet Explorer 5.5 with SP2 or later

**Workstations:**

- Microsoft Windows 2000 Professional with SP3 or later
- Microsoft Windows XP Home or Professional with SP2 or later (32- and 64-bit)
- Microsoft Windows Vista (32- and 64-bit)
- Microsoft Windows 7 (32- and 64-bit)

**Servers:**

- Microsoft Windows 2000 Server—Advanced or Small Business, with SP3 or later
- Microsoft Windows 2003 Standard Server—Enterprise, Web Edition, or Small Business
- Microsoft Windows 2008 Server (32- and 64-bit)—Standard, Enterprise, Small Business, or Essential Business Server
- Total Protection Service—Advanced requires that you own a unique email domain name and an email server with a static IP address

**Free 30-Day Trial**

**Comprehensive Coverage in a Single Solution**

McAfee Total Protection Service is designed for businesses of all size, providing endpoint, email, and web security against the latest known and unknown threats. Total Protection Service reduces point product proliferation with a single solution.

**Quick Deployment to All Users**

Regardless of where your users are located, simply email them the customized installation link for quick deployment over the Internet so that they can get on board and get protected. Additional push or silent installation options are also available.

**Always On-Guard Security**

Enjoy uninterrupted protection that's never obsolete with daily, automated updates and service upgrades through the McAfee Security SaaS platform. Simply install the protection, and the software transparently updates via an Internet connection with no maintenance and no disruptions.

**McAfee Artemis Technology**

Integrated into Total Protection Service solutions, McAfee Artemis Technology is always-on protection that uses signature and behavioral-based scanning to reduce exposure from unknown threats. Artemis quarantines and blocks threats in real time and closes any protection gap in your security. Feel secure knowing that Artemis is keeping your users continuously protected from advanced threats even before the signature is developed—anytime, anywhere.

**Simplified Security Management**

From the web-based McAfee SecurityCenter console, centralize installation, configuration, reporting, updates, and group management. With any web browser, access the SecurityCenter to customize reporting widgets, schedule reports, or run virus and vulnerability scans.

**Automatic Updates for Endpoint Protection**

With the system connected to the Internet or an Internet relay, Total Protection Service automatically protects and updates all systems at regular intervals throughout the day, as well as providing upgrades to the latest version—all without interruption to the end user. Fast updates

keep your desktops, servers, and email proactively protected against ever-evolving virus, spyware and hacker attacks.

**Integrated Web Security**

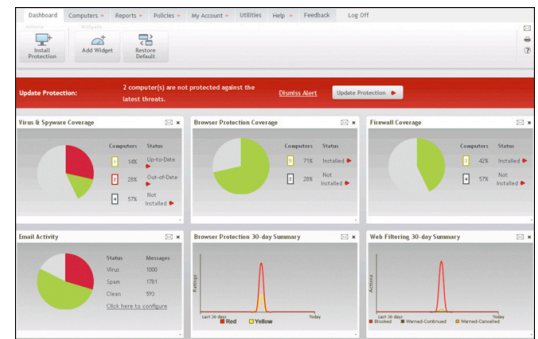

McAfee SiteAdvisor technology warns users before they visit a potentially dangerous website and helps to avoid online threats in real time. By testing websites and delivering safety ratings to users while they browse, SiteAdvisor helps users stay safe online. And through the SecurityCenter, you can extend your protection and customize web policies to filter out unwanted or malicious websites.

**Vulnerability Assessment**

Easily scan your perimeter for vulnerabilities, and take action against weaknesses in your network. View detailed reports to ensure your network status and compliance through our continual comparison against widely adopted benchmarks.

**Advanced, Real-Time Email Security**

In our advanced offering, Total Protection Service processes email in real time through a highly secure system. Filter and quarantine inbound threats from your email before they reach your network—no installation is required. Compatible with all major email applications, such as Microsoft Exchange, our email security service simply redirects your inbound email to McAfee and scans your mail with less than a one-second delay. McAfee also offers email server protection for users who would like to monitor email security in house.

The McAfee SecurityCenter provides centralized management of installations, reporting, and policy setting.
